Electronic freight transport information (eFTI)

About Electronic Freight Transport Information (eFTI)

eFTI is an **EU-wide** project aiming to establish a legal and standardized framework **for the digital exchange of freight transport information** between companies and authorities.

The project will be completed in December 2026, by which time European authorities are expected to have the capacity to receive and process freighting documents in electronic form.
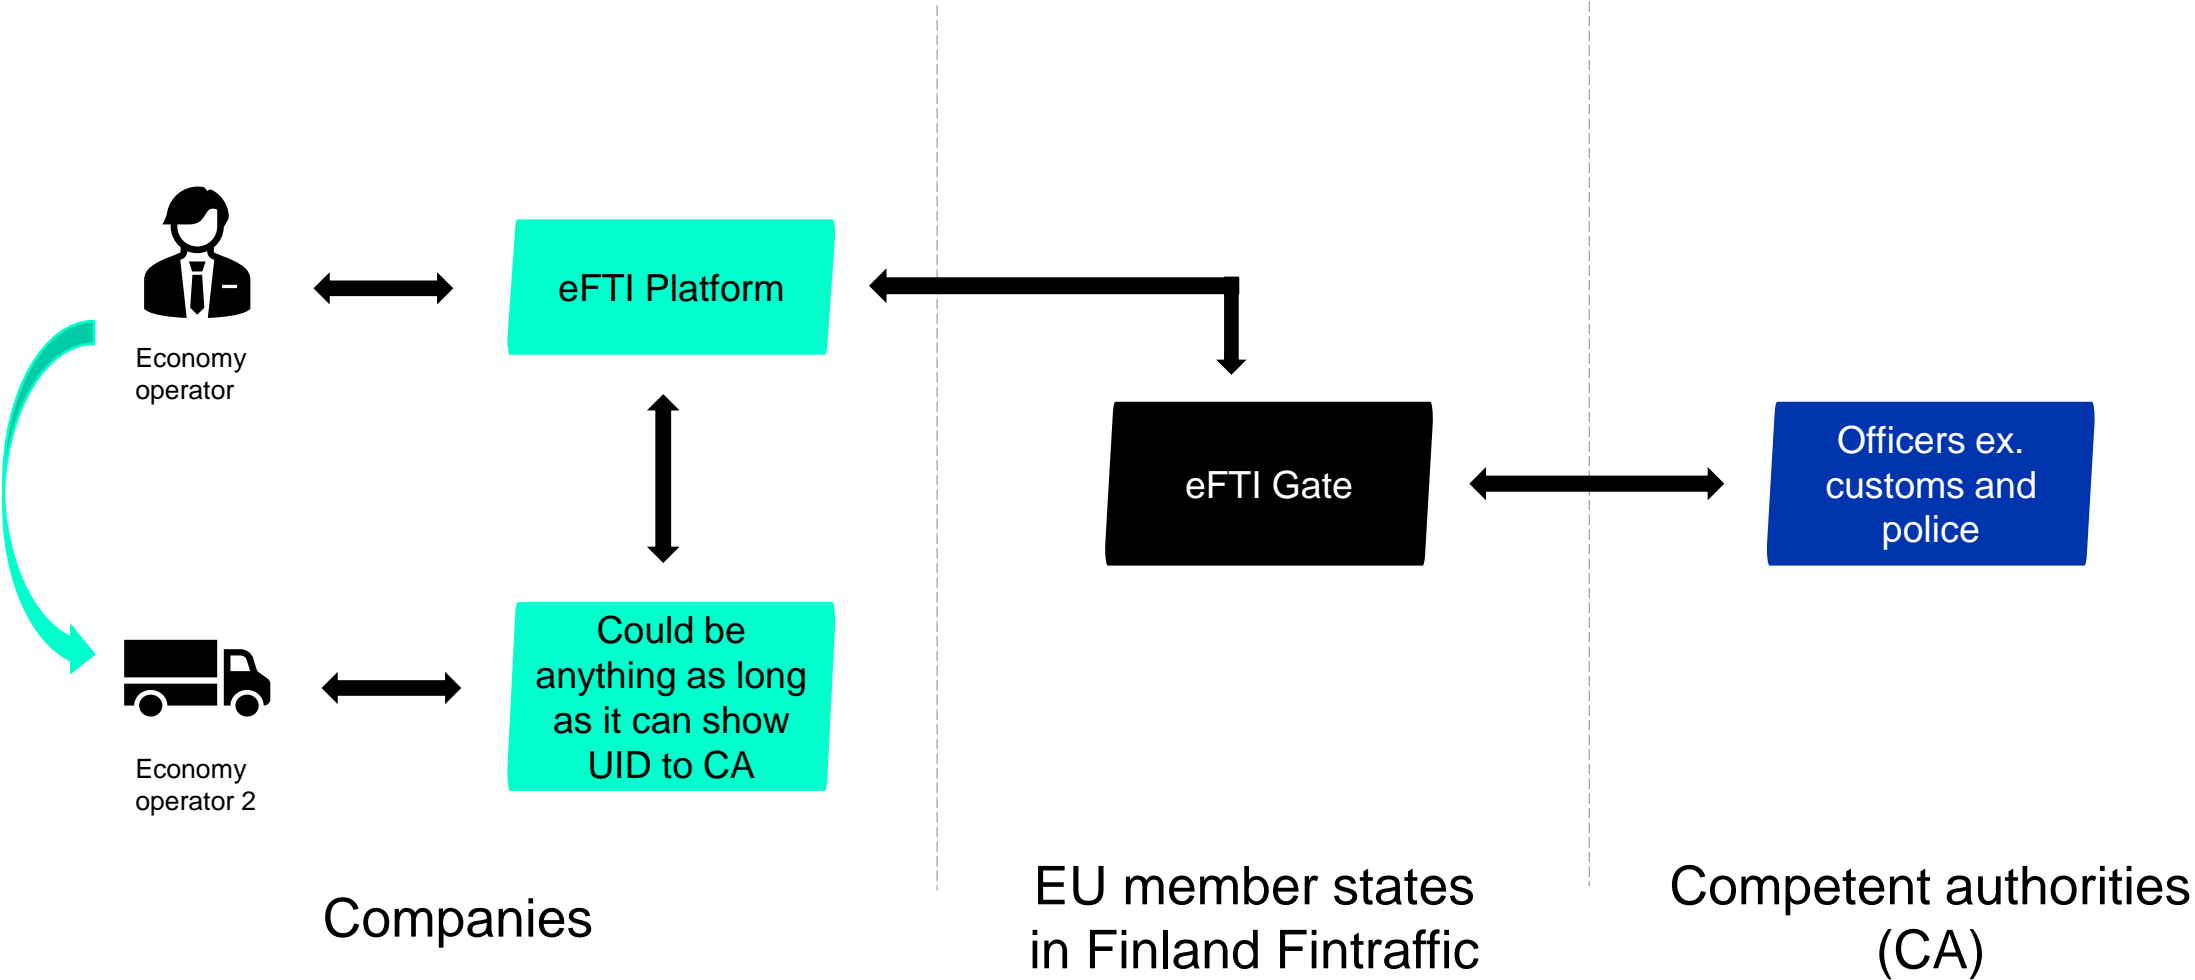

The aim is to boost the efficiency of freight traffic and logistics as well as reduce the administrative burden for operators. This work has been preceded by the European Commission's 'Sustainable and Smart Mobility Strategy – putting European transport on track for the future.

Traficom acts as the responsible authority in Finland and Fintraffic is developing the system.

The project concerns freight transport information transmitted with freight carried by rail, road and inland water.

Other future regulations (ex. The Combined Transport) will encourage the use of eFTI.

eFTI in practice
